

"I was battling mites, and it was never-ending.  
Forbid miticide has been a godsend product."

Brad Dubbels, Green Guys, San Antonio, TX

Crops	Forbid Insecticide 4F Use Rate	Application Interval/Timing
Shrubs, trees (including non-bearing fruit trees), flowers and foliage plants in outdoor landscapes	1.4 to 4.0 fl. oz. (40-120 mL)/100 gallons of spray solution or 2-6 mL/5 gallons of spray solution	Apply specific dosage as needed for control

### RELAX. YOU'RE BACKED BY BAYER.

Training. Troubleshooting. Innovating. Count on us to stand behind you now and for years to come. Get science and support at [BackedByBayer.com](http://BackedByBayer.com) or 1-800-331-2867.

**FORBID®**

### WHAT IT IS.

Miticide and insecticide that fights two of the most economically destructive pests in ornamentals.

### WHAT IT DOES.

Uses a novel mode of action to control all life stages of mites and whiteflies.

### WHY IT'S BETTER THAN THE COMPETITION.

- A new class of chemistry controls pests resistant to other products
- Kills pests at stages other products can't control
- Longer residual—up to 45 days
- More flexible application window

### HOW IT MAKES YOUR JOB EASIER.

Gives you easier, more complete, and longer residual control of mites and whiteflies.

## THE SCIENCE OF FORBID® INSECTICIDE.

Forbid® insecticide gives you the novel mode of action of the tetrionic acids. What's the big advantage? Most acaricides are neurotoxins, respiratory poisons or growth regulators, so they can only control pests at certain life stages, and resistance can be a problem. But Forbid disrupts lipid biosynthesis, so pests at all stages dry up and die within three to seven days of treatment.

### The competition doesn't come close:

- Controls all stages—eggs, nymphs, immobile nymphs & adults
- Residual control up to 45 days
- Excellent translaminar activity for easier coverage
- Minimal effects on beneficial insects when used according to label directions

### Controls your most destructive pests:

- Spider mites (Including twospotted, southern red, boxwood, spruce and euonymus mites)
- Broad mites and flat mites
- Rust and blister mites
- Whiteflies (Including sweetpotato, silverleaf, giant and greenhouse)

### Frequently asked questions.

- >Q What's the real benefit of using a product that controls mites and whiteflies throughout their life cycle?
- >A Your application windows aren't limited. A foliar application of Forbid controls pests at any stage of the lifecycle—eggs, nymphs or adults—and gives you extended residual control.
- >Q Are there really no resistance problems with Forbid insecticide?
- >A Studies to date have shown no resistance to Forbid insecticide, and Forbid is active on mites and whiteflies resistant to other products. A sound agronomic practice would incorporate up to three applications of Forbid per season in rotation with other treatments utilizing different modes of action.

## THE SCIENCE OF YOUR PROFESSION.

Every ounce of Forbid is Backed by Bayer, and all the science and support you need to get the job done right. That's what you should expect from an industry leader.

### Our staff is your staff.

No one invests as much in product development as Bayer. Our scientists' expertise in chemistry and formulation technology is unrivaled around the world. Our field sales and technical representatives are always ready to help you. You'll find them, along with additional information, 24 hours a day, 7 days a week at [BackedByBayer.com](http://BackedByBayer.com).

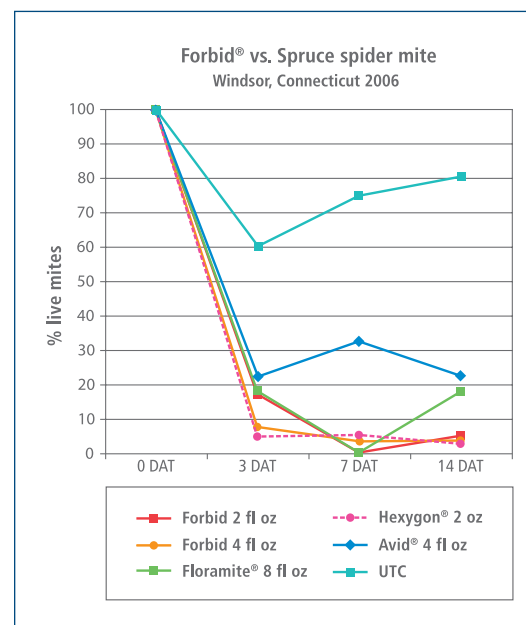

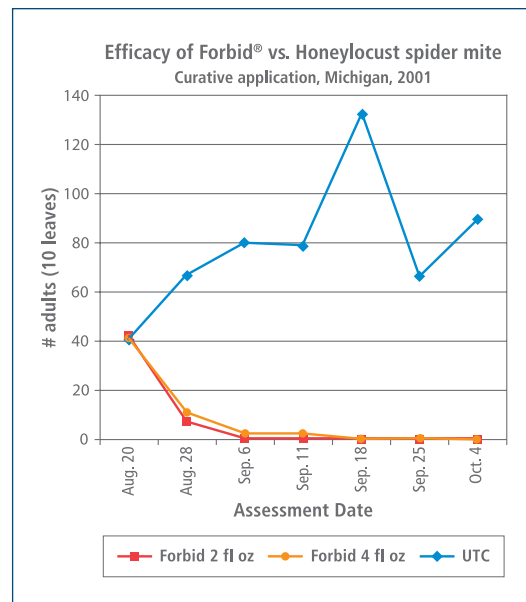

### Product support year round.

We'll help you diagnose problems, troubleshoot issues, and get every product benefit you expect—and even some you don't. We also offer interactive training throughout the year, to help grow your business and your success.

### Complete satisfaction guarantee.

Bayer guarantees your satisfaction, after all, your success is our success.
